PROFILE

I spent three years in the 24/7 network operations centre at Tizeti, a wireless and fibre internet provider serving 3M+ subscribers. I gave first to third line support to 200+ internal staff, resolved around 85% of critical incidents within SLA, did the backend configuration and testing on each site of a 25-site rollout in 2022, and presented the NOC's weekly KPI and incident reports to management. Before that I used SQL to reconcile payments against bank statements for a revenue collection firm. I hold an MSc in Big Data Technologies (Merit) and am a Professional Member of BCS.

KEY SKILLS

- **Network operations:** 24/7 NOC rota; ServiceNow, Jira and Halo; SLAs; incident and change process; hardware replacements under change control; upstream provider liaison during outages
- **Routing and switching:** OSPF, BGP, VLANs, NAT, VPN, DHCP, DNS, IPv4 and IPv6; Cisco, MikroTik, Cambium, Ubiquiti and Baicells equipment
- **IT support:** First to third line; faults traced through router and system logs; AnyDesk, TeamViewer, Remote Desktop and Quick Assist; SSH and Winbox; everyday Microsoft 365
- **Data:** SQL (MySQL and BigQuery; CTEs and window functions in MSc and course work); Python (pandas, seaborn) in Colab; data cleaning and validation; Excel (everyday formulas and charts)
- **Cloud and reporting:** Google Cloud (BigQuery, Cloud Storage, Speech-to-Text) at project level; Databricks and PySpark, R and ggplot2 (MSc coursework); Power BI and Tableau (beginner)
- **Communication:** Weekly KPI and incident reports to management; rewrote and maintained setup guides; finance reports rebuilt around their readers' questions; staff training

EXPERIENCE

Operations Customer Expert
Teleperformance UK, Glasgow
Jan 2026 - Present
Employed by Teleperformance, working in a UK bank's personal banking department.

- I give first-line customer and technical support, mostly by phone, including to anxious or vulnerable customers. Every case I handle is logged and traceable under strict quality and audit frameworks, and I flag recurring issues to team leads.

Guest Service Agent (Front Desk)
Sandman Signature Glasgow Hotel
Mar 2024 - Jan 2026
24/7 hotel, held alongside full-time MSc study.

- I was the first response for faults on POS terminals, key-card systems and guest devices, alongside 30+ guest enquiries a shift. With no authority over reception, housekeeping or maintenance, I got all three to agree one escalation process and built it into the daily handover notes; guest satisfaction reached 95% and complaints fell by about a quarter.

Network Operations Engineer
Tizeti Network Limited, Lagos
Nov 2020 - Dec 2023
Y Combinator-backed internet service provider (wireless and fibre), 3M+ subscribers.

- On the 24/7 NOC rota I gave first to third line support to 200+ internal staff, escalating to field engineers and R&D, and resolved around 85% of critical incidents within SLA through ServiceNow, Jira and Halo. I noticed faults were getting past our monitoring (speed and latency problems, as I remember it), raised it with my team and the field engineers, and together we corrected the configuration and the monitoring tool.

- After a fibre upgrade took a site down, I found the IPv6 iBGP session to our transit router had dropped because the IPv4 gateway had been moved to the new VLAN interface but the IPv6 gateway had not. I corrected the IPv6 gateway on the edge and transit routers, updated the static route to the controller so the equipment came back online, and documented the cause.
- My part in the 2022 rollout of new base stations across 25 sites was the backend configuration and testing on each site: OSPF, VLANs, NAT, hotspot servers, firmware, credential hardening and public IPs, then reachability tests and backup checks. I also configured a new BGP peering session with AMS-IX through MainOne for IPv4 and IPv6, and rewrote and maintained the team's base station setup guides as devices and processes changed.
- I compiled the NOC's weekly KPI and incident reports and presented them to management, and stood in as informal team lead when my manager was away. On our first Baicells LTE rollout, equipment nobody on the team had used before, I worked alongside the vendor's engineer on the backend configuration and testing, then helped run internal training.

Database and IT Analyst
SVL-NIG Global Enterprise, Asaba
Oct 2019 - Oct 2020
Consulting firm running revenue collection for a state government agency; sole IT support.

- I ran asset inventory and device provisioning. I tracked demand notices worth over ₦94 million and used SQL (MySQL) to reconcile payments against bank statements across 25 local government areas, tracing each mismatch to its cause. Finance kept sending the same follow-up questions, so I rebuilt the monthly reports around their real questions, and follow-up queries fell by about 60%.

IT Officer
Delta State Signage and Advertising Agency (DESAA), Asaba
Nov 2018 - Oct 2019
State government agency (public sector).

- I handled day-to-day IT across departments, covering endpoints, printers, routers and VLANs, and uptime rose by about 30%. I also introduced data cleaning and validation routines for departmental records and trained staff on troubleshooting and security awareness.

SELECTED PROJECT

- For my MSc dissertation (individual work) I built a Python pipeline on Google Cloud that searched YouTube by topic through the official YouTube Data API, downloaded the audio with yt-dlp, reduced background noise, transcribed it with Speech-to-Text and stored the transcripts and video metadata in BigQuery. I made reruns skip files already processed, added retries with back-off for temporary API errors, and wrote a SQL data-quality query checking null counts, transcript lengths and topic balance.

EDUCATION

MSc Big Data Technologies (Merit)
Glasgow Caledonian University
Jan 2024 - Jun 2025 (graduated Jul 2025)

BSc Computer Science, 2:1
Babcock University, Nigeria
2014 - 2018

CERTIFICATIONS

- Cisco Networking Academy: CCNA Routing and Switching training completed (2020); Network Security (2022)
- Oracle Database SQL Certified Expert (2016); ICSI Certified Network Security Specialist (2020); Google IT Support Specialization (2021)
- Professional Member, BCS, The Chartered Institute for IT (since Apr 2025)
- In progress: ITIL 4 Foundation; JNCIA-Junos
